

A diagram illustrating a titration setup. A blue burette with a stopcock is positioned above a beaker. The burette is labeled "titrant" and has a single drop of blue liquid falling from its tip. The beaker contains a liquid with a vertical color gradient from red at the bottom to green at the top, labeled "redox indicator". A single drop of blue liquid is shown falling from the beaker's rim. The word "analyte" is also present in the middle of the beaker's liquid.
