

THE "BLOOK BALL"

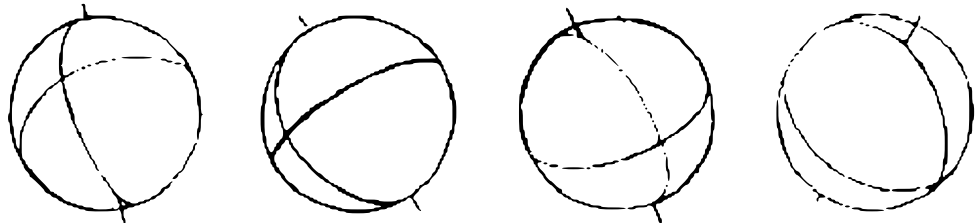

If you will now turn back to page 12 and look at the string of balls, you will see that we are getting right into big business. You need some practice on these. Never mind if they are a little off.

Use your eye to tell you where to put the curves to divide this ball.

The divisions need not be perfect, but practice on these.

See how many positions you can draw. Always draw the axis.

Use a compass or a coin, if you wish, until you get the idea.

The better you can draw these balls in any old position you wish, the better you are going to be. The line from the top to bottom is the "middle" line of the face. The horizontal line, which looks like the equator, is the "eyeline," and it also locates the ear.
