

PERSPECTIVE

Two point perspective

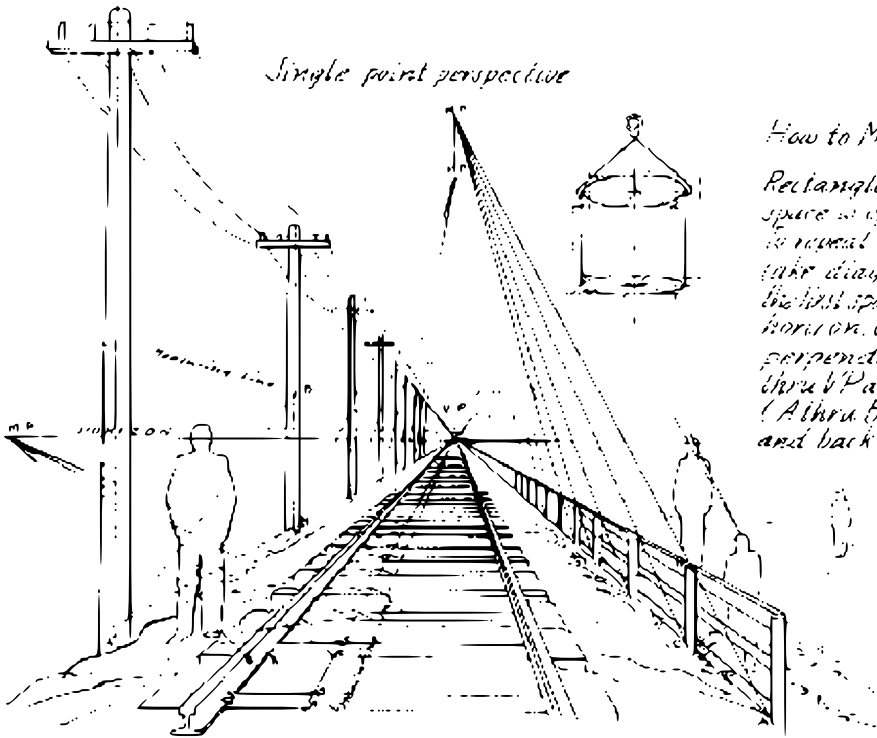

V.P. - Vanishing point

M.P. - Measuring point

House is measured by diagonals only, and with Horizon cutting at height of man.

All measuring points of perpendicular planes will fall on a perpendicular line through V.P. of these planes. All measuring points of planes parallel to ground plane will be located on horizon.

Single point perspective

How to Measure

Rectangle of first space is optional. To repeat simply take diagonal of the first space to the horizon, or be the perpendicular thru V.P. and back. (A thru B to M.P. and back to C.)

Perspective looks more difficult than it is. You must know it to draw.
