

## LEARN TO DRAW FROM LIFE

When sketching from life the most practical way is to hold pencil or ruler at arm's length and by making focal or title point of your subject, both up and down and across. As you move rectangle the subject will fit into. 2nd area thus divided as above. Now by remembering just where model's point fell, you can light again for quarter distance first block in my simple hotel painting, the neck in the smaller forms. Draw the skin also in simple and full etc.
