

Kaleidoscope with seamless tiling.

Base triangle is 300 px in width.

Enter the group of the parent tile ("g3183") and paste in a pattern "plate". The spacer object in the spacer layer can be used to center-align it to position.

Optimal "plate" is a group of various fancy parts, all over a 2100/2100 px sized circle. This way, the bounding box's shape won't change much after rotating the plate to generate patterns.
