4 Nov 1948

From OI OB

For some time we have been concerned by the recurring [REDACTED] [REDACTED] They periodically continue to pop up; during the last week, one was observed hovering over [REDACTED] for about thirty minutes. They have been reported by so many sources and from such a variety of places that we are convinced that they cannot be disregarded and must be explained on some basis which is perhaps slightly beyond the scope of our present intelligence thinking.

When officers of this Directorate recently visited the Swedish Air Intelligence Service. This question was put to the Swedes. Their answer was that some reliable and fully technically qualified people have reached the conclusion that "these phenomena are obviously the result of [REDACTED] [REDACTED] which cannot be credited to any presently known [REDACTED] [REDACTED] They are therefore assuming that these objects originate from some [REDACTED] [REDACTED]."

One of these objects was observed by a [REDACTED] technical expert near his home on the edge of a lake. The object crashed or landed in the lake and he carefully noted its azimuth from his point of observation. [REDACTED] intelligence was sufficiently confident in his observation that a naval salvage team was sent to the lake. Operations were underway during the visit of [REDACTED]. Divers had discovered a previously uncharted crater on the floor of the lake. No further information is available, but we have been promised knowledge of the results. In their opinion, the observation was reliable, and they believe that the depression on the floor of the lake, which did not appear on current hydrographic charts, was in fact caused by a [REDACTED].

Although accepting this theory of the origin of these objects poses a whole new group of questions and puts much of our thinking in a changed light, we are inclined not to discredit entirely this somewhat spectacular theory, meantime keeping an open mind on the subject. What are your reactions?
